ProMinent®

Modular Metering System for High-Precision Chemical Dosing

Metering System DULCODOS panel DSWc

Five good reasons for the metering system DULCODOS panel DSWc.

Process reliability

The DULCODOS panel DSWc metering system features consistent, reliable components that ensure precise and safe dosing of various fluids.

Flexibility

The metering system is designed for suction-side connections and can be flexibly adapted to customer requirements

Time and cost saving

The DULCODOS panel (DSWc) metering system is a plug-and-play solution that enables quick and easy installation at no additional cost.

Custom options

The DULCODOS panel DSWc metering system offers many options, such as suction aids, overflow vessels with acid vapor separators, rinsing functions, leak sensors, and much more, to meet individual customer requirements.

Space saving

The compact design of the metering system makes it easy to install and requires minimal space. If only limited space is available, DULCODOS panel is the ideal solution.

DULCODOS panel DSWc
powerful, flexible, configurable

ProMinent is revolutionizing chemical metering with its innovative DULCODOS panel metering system. This modular system integrates up to three metering pumps and offers maximum flexibility and precision for a wide range of applications.

Individual configuration for tailor-made solutions

The metering system is configured according to individual requirements. The individual components are selected and coordinated according to material resistance, pump performance, and function.
This results in tailor-made solutions for a wide range of applications.

Compact design for maximum performance

DULCODOS panel is characterized by its well-thought-out design, which takes up little space yet offers high performance. It delivers up to 1,000 liters per hour and offers flexible installation options thanks to height-adjustable piping and rotatable pump mounts.

High-quality materials for durability and reliability

The system is equipped with infrared-welded PVC and PVDF pipes. There are no adhesive joints, which increases chemical resistance. This makes the dosing system particularly robust and also ensures a long service life and high reliability.

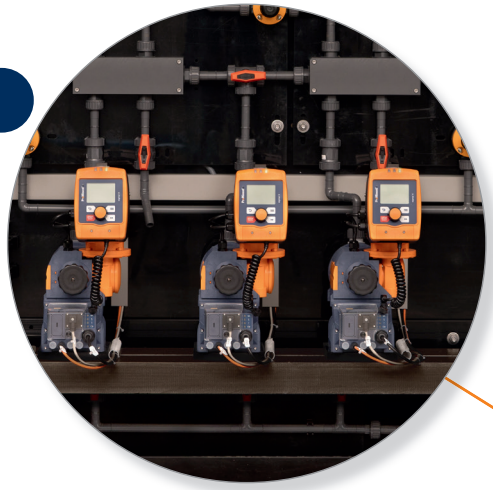

Increased safety and ease of use

Components such as a drip tray with leak sensor, overflow vessels with acid vapor separators, and a transparent splash guard increase safety and ease of use. The electrical pre-installation in the terminal box with main switch makes commissioning easy.

Reliable continuous operation

A third pump in the central pressure line on standby, ready to step in flexibly.

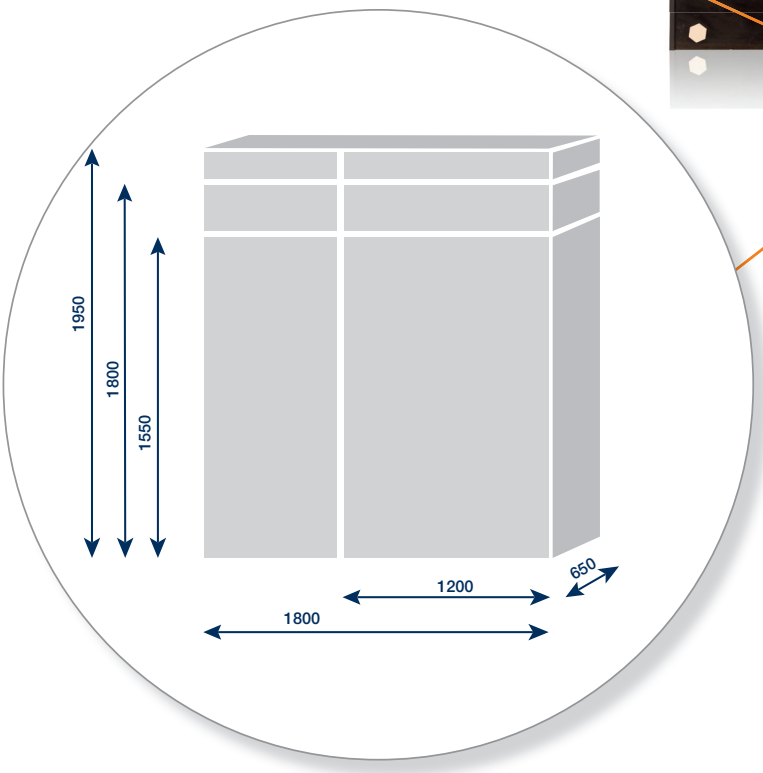

Pragmatic Design

Sturdy PP skid with drainage option in drip tray and easy-to-use splash guard.

Configurability

Modular plug-and-play metering system tailored to individual requirements.

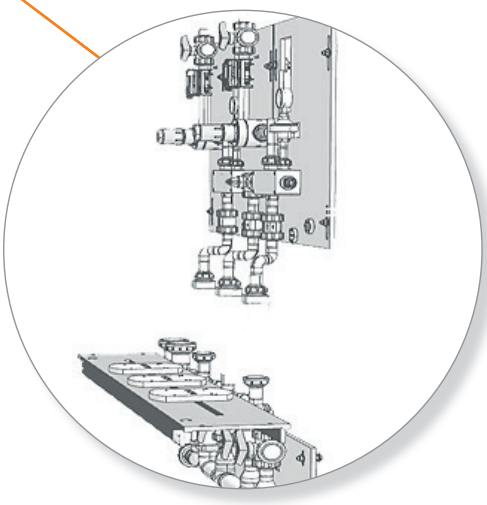

Comfort and safety

Depending on requirements, the system can be expanded to include components such as overflow vessels, acid vapour separators, dirt traps, leakage sensors, or flow sensors.

Highest chemical resistance

Infrared welding technology replaces the conventional PVC-U adhesive system. This expands the range of chemicals that can be used.

Maximum flexibility

User-friendly installation concept for accessibility and use of ProMinent metering pumps in various sizes and capacities.

Consulting

As with all its products, ProMinent offers comprehensive, expert advice before you make your purchase. This ensures that the product is optimally tailored to your application. And nothing stands in the way of smooth integration into your process.

Service

Even after your purchase, ProMinent's experts are there for you. Whether you need spare parts, want to learn more about the technology in our seminars or require technical advice – ProMinent is there to support you. You will find many services you can use on our website under Service. With ProMinet at your side, you will experience trouble-free processes and maintain the value of your product.
Customer Services – Unlimited

Expertise

ProMinent has over 65 years of experience in patenting and manufacturing products and systems for fluid metering, water treatment and disinfection. The group draws on a unique wealth of experience and technical expertise for a wide range of applications in numerous industries. You will find specialists for your application in our network of global branches.
Let us advise you.
